

# CLEAN SCREEN® PHASES FOR DRUGS OF ABUSE TESTING

## CLEAN SCREEN® DAU (Drugs of Abuse)

CLEAN SCREEN® DAU is a copolymerized sorbent, utilizing both a reverse (C8) phase and an ion exchange (benzenesulfonic acid) phase bonded to the same particle. The mixed mode nature allows for maximum selectivity for the extraction of acids, neutrals and bases. This flexibility and versatility is ideal for both screening and confirmation analyses of virtually all drug categories.

Organic Loading = 12.4%  
Surface Area = 500 m<sup>2</sup>/g

Average Pore Size = 60Å  
Pore Volume = 0.77 cm<sup>3</sup>/g

Exchange Capacity = 0.077 meq/g

### Quick Tip

#### Condition Column:

Proper conditioning of the SPE column prior to sample application will result in accurate recovery, reduced interference and particulate removal. Conditioning is performed by adding methanol, followed by DI water and finally sample buffer.
